==========

EOC YOUTH CYBERSECURITY SIMULATION

==========

If you are reading this...

Congratulations.

You were curious enough to find this file.

But there is something you should know.

You did not intentionally download this file.

You clicked a button that said:

```
    "CONTINUE"
```

You thought that button was simply going to take

you to the EOC Youth Gospel of John study.

And it did.

But it ALSO downloaded this file.

```
    NOTHING WAS STOLEN
```

This file is completely harmless.

No password was collected.

No account was accessed.

No malware was installed.

No damage was done to your device.

This was a controlled cybersecurity awareness exercise.

```
        SO WHAT HAPPENED?
```

You trusted the website because it looked familiar.

You trusted the button because it looked harmless.

You expected the button to do one thing:

```
        "Continue to the study."
```

You didn't know it was doing something else.

And that is the lesson.

A real attacker doesn't necessarily need you to
download something that looks dangerous.

They can hide something unexpected behind something
you already trust.

```
        JUDAS SCAMARIOT
```

The person who created this simulation was not some
random hacker on the internet.

It was "Judas Scamariot."

He used something you already trusted:

```
EOC YOUTH
```

He gave you something you wanted:

```
THE JOHN STUDY
```

And he hid something you weren't expecting:

```
THIS FILE
```

That is social engineering.

```
ASK YOURSELF:
```

Did you read the URL before clicking?

Did you know exactly where the button would take you?

Did you expect a file to download?

Did you check what had actually happened afterwards?

Would you notice if the downloaded file had been

something more dangerous?

```
        REMEMBER

      STOP.
      THINK.
      VERIFY.
```

A familiar name does not make a link safe.

A familiar website does not make a download safe.

A trusted person can have their account compromised.

And a button can do more than you expect.

EOC YOUTH CYBERSECURITY AWARENESS EVENING

16 OCTOBER 2026

This file was intentionally created as a harmless simulation for the EOC Youth CyberSecurity Awareness Evening.

You found it.

Most people probably won't.

And that is exactly why curiosity matters.
